The examiner acknowledges the application. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-34, drawn to a fusion protein exhibiting a phase transition, classified in class 530, subclass 350.
- II. Claim 35-61, drawn to DNA encoding protein of Group I, expression vector, host cell and recombinant production of said protein, classified in class 435, subclass 69.7 and 252.33.
- III. Claim 62, drawn to a method of optimizing size of an ELP expression tag, classified in class 345, subclass 6.
- IV. Claim 63-65, drawn to a method of purification of fusion proteins, classified in class 530, and subclass 412.

Groups I and II are directed to independent chemical entities that require different search in the patent and non-patent literature as indicated by their different classification.

Group III-IV are drawn to two independent methods having different steps and products. The methods cannot be practiced together as revealed by the specification.

Inventions I and III-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, the fusion protein and the method of optimizing the size of an ELP expression tag and the method of protein purification are not

disclosed as capable of use together, have different function and different modes of operation.

Inventions II and III-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, the DNA of Group II, the method of optimizing the size of an ELP expression tag and the method of protein purification are not disclosed as capable of use together, have different function and different modes of operation as revealed by the specification.

Because the inventions I – IV are distinct for the reasons given above, have different classification and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C. F. R. paragraph 1.48 (b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filled petition under 37 C.F.R. paragraph 1.48 (b) and by the fee required under CFR paragraph 1.17(h).
